22	Summary of the Event	The Department of Computer Applications (BCA) conducted an PHP Add-on program from 16th Feb to 28th Feb 2026 to provide students with foundational knowledge in server-side web development. The sessions focused on introducing students to PHP programming and its practical implementation in web applications. The program began with setting up the required development environment and installing PHP support. Students were introduced to the basics of PHP, including variables, syntax, and arithmetic operations. Gradually, they learned how to create simple dynamic web pages using PHP. Further sessions covered working with databases using MySQL. Students were guided through creating databases, connecting PHP with MySQL, and performing CRUD operations. Practical demonstrations were conducted to help students understand how data is stored, retrieved, updated, and deleted in real-time applications. The training was conducted in a hands-on manner, enabling students to write and execute PHP scripts independently. By the end of the program, students gained a clear understanding of basic server-side programming and database connectivity concepts. Overall, the PHP Add-On Program helped students strengthen their backend fundamentals and provided them with essential skills required for web development.

Feedback on Training Program - Full

Stack Development - PHP and MySQL

The training session on PHP and MySQL was very informative and well-structured. The concepts were explained clearly, starting from the basics to database connectivity. The hands on exercises improved my confidence in writing code and building dynamic web pages. The trainer explained doubts patiently and ensured that everyone could follow along. Overall, the session was valuable and helped me to build my project.
